Straw Bundle Drum

As for a straw bundle drum (see picture (4)), put the straws together and cut them to the same length of about two shakus (1 shaku = 0.994 ft = 0.303 meters). Bundle them into a diameter of about one shaku and tie it with hemp cord. Twine a straw rope on top of it. The usual weight of this drum is around three kan (1 kan = 3.75 kg). This is the same shape as the straw bundle drums used in Japanese archery. Tie both ends of it with hemp rope and hang it at chest height for striking.
